(BRIEF DESCRIPTION) Global accounting recommend that United Nations adopt the system of Account for global entropy production SAGE-P The purpose of the account is:

to progressively reduce the absolute level of entropy production on the Planet towards some socially (and culturally) acceptable rate of sustainable material consumption;

- to promote entropy efficiencies in the production function, (i.e., minima material-energy per unit inflow into GLEF);
- to promote entropy efficiencies in the consumption function, (i.e., maxima of service flows per unit outflow from GLEF);

to promote entropy efficiencies in the capital accumulation function, [i.e., maxima of GLEF available for human consumption or per capita

(inclusive) wealth of the human population on the Planet];

- objectify the abstract objects (immaterial economy) as a measure of the human welfare index

(**WHY**) RELEVANCE OF THE PROPOSAL TO THE NEEDS AND CONSTRAINTS OF THE DEGROWTH

(KEY WORDS) reduce the rate of global entropy production
